

For Immediate Release - Lofty Perch, Inc. Press Release

Veteran Control System Security Expert Ed Gorski joins Lofty Perch

Toronto, Canada — December 11, 2007

Lofty Perch, Inc. (www.loftyperch.com) and Mark Fabro, President and CEO today announced the appointment of Mr. Ed Gorski as Senior Security Systems Engineer. With more than 30 years of cross-industry experience including nuclear power generation, electrical component manufacturing, oil & gas refining, primary metals manufacturing, Mr. Gorski is exceptionally well positioned to support Lofty Perch in its assessment technology development.

“Lofty Perch continues to excel in the control systems cyber security domain,” says Mark Fabro, “and the addition of Ed to the team will only solidify our leadership in the development and delivery of cyber security assessment technologies for the industrial control system community.”

Previously, Mr. Gorski worked for Goodyear Tire & Rubber, Cutler-Hammer, Tennessee Valley Authority and for Lockheed-Martin, Bechtel, and Battelle as a contractor for the U.S. Department of Energy. His extensive background in the area of computer security in these environments propelled his development of a security framework for industrial control systems. Under Gorski’s work, this framework has since evolved into the Control System Cyber Security Self-Assessment Toolkit (CS²SAT) and is a unique application for determination of a company’s security posture in their control system environment.

“Critical infrastructure organizations need unique solutions and expertise to protect their cyber assets proactively, and it is becoming critical to create programs that can empower the owner/operators with the tools and knowledge to do so. I am excited to be working with Lofty Perch as they continue to lead in these areas, and to contribute through developing key assessment technologies, compliance programs, and outreach.” Ed Gorski said.

About Lofty Perch Inc.

Lofty Perch is a global leader in providing cyber security services and technology for mission critical information architectures. With a core focus on SCADA and Process Control environments, Lofty Perch leverages scientific expertise, security engineering leadership, and rich practical experience to develop solutions to meet the challenges associated with critical infrastructure protection (CIP). As a recognized leader in the control systems security domain, Lofty Perch works with key organizations such as the Idaho National Laboratory (INL) and the DHS Control Systems Security Program, doing cyber security assessments, training, and developing recommended practices to industry.

Lofty Perch Inc. is a privately held company founded in 2005 and headquartered in Toronto, Canada, with offices in Austin, Los Angeles, Idaho Falls, and Washington, D.C.
