

Securing Critical Information Infrastructures

## Training Course – Introduction to CS-MARS

Length – 16 Hours

---

### Course Description

This course will train the student to install, configure and manage a CS-MARS. The students will take a new CS-MARS and go through all the necessary steps to bring the device into service and operating within the network. Pre-site installation and planning will also be covered in depth. The goal of this class is to enable a student to successfully install the CS-MARS on their own.

---

### Course Outline

- Pre-Installation Preparation
  - Setting up CS-MARS within the network
  - Overview of configuration and settings
  - Network discovery
  - Network Device Configuration
  - Create and manage rules
  - Event management and Incident investigations
  - Create reports
